

We provide complete POS solutions for single to multi-store operators with host using standard Microsoft operating systems. Built on Progress, a technology leader used in 90% of the Fortune 500, our application with its unique functionality is deployed in liquor, smoke, pet, non-profit, grocery, health, c-store and specialty gift. Crystal Reports, Excel integration and an industry standard ODBC connection allow limitless reporting options. Fully PCI Compliant with credit choices provide several options for retailers.

Easy to use and learn

- Touch and/or keyboard interface
- Context sensitive help
- Supports most OPOS devices

Flexible transaction processing

- Integrated credit/debit
- Electronic check conversion
- Gift cards, self hosted or processor based
- Signature capture

Inventory control

- Item movement and historical analysis
- Serial number tracking
- Physical inventory and replenishment

Get accurate and timely information

- Excel reporting
- Customizable Crystal reports
- Accounting package interface
- Multiple loss prevention features

Centralized store management

- Multiple item maintenance and pricing zones
- Reporting by store, market, district, region or enterprise
- Standard Excel and customizable Crystal reports
- Uni-eye dynamic loss prevention
- Enterprise wide item return management
- Purchase orders, warehouse distribution and replenishment orders
- Customizable label, tag, and sign printing

Realtime Store Communication

- Two-way, assured messaging between stores and host
- Uses XML via standard DSL or Cable internet connections.
- No need to manage replication or trickle polling issues.
- Self hosted or processor based multi-store gift cards

About Osprey

Osprey Retail Systems, Inc. was founded in 1990 by a small group of industry-leading POS integrators to develop state-of-the-art, general retail, in-store software. Revolutionary developments in relational database design and object-oriented program development allow Osprey to produce a system "kernel" that includes a rich feature set of POS functions for the high volume as-well-as the specialty store retail marketplace. Perhaps the software's most dramatic virtue is its ABL heritage that gives Osprey's designers the ability to rapidly personalize in-store software to meet unusual retail and non-retail requirements without the associated delays and copious anomalies commonly found in 3GL environments. By incorporating "smart data objects" Osprey is able to easily add functionality without modifying the POS "kernel", thereby insuring product migration in our ever-changing world for customers who wish to leverage their personalization investment for many years to come.
